The SCANCSV.LUA library

Jaroslav Hajtmar

Apology English-speaking participants

Sorry, but this talk is only in Czech. Due to my language skills I would probably just did not know enough to say everything important. I will try to at least the guide slideshow in English.

Thanks for your understanding.

SCANCSV - history and motivation

- 2005 - appearance macro scanbase.tex of Petr Olšák. Macro processing text files in a certain format.

- Petr Olšák modify and generalized the macro scanbase.tex to macro scancsv.tex. This macro processing text files in CSV format. I used it in plainTeX to 2008.

- 2008 - modification for LaTeX (Jaromír Kuben) scancsv-latex.tex and modification for ConTeXt (Petr Olšák) - scancsv-context.tex. I used it in ConTeXt (MkII) today.

- 2010 - I began to use ConTeXt MkIV. scancsv-context.tex does not work. Macro is unable to process character set UTF-8!!! (in my opinion).

- March 2010 - familiarization with LuaTeX, Lua language and start using the library. First version - practicaly useless version.

- August 2010 - applicable version
